Ingani MPHEPHU

Software Developer | Web Development | System Optimization

Cape Town, Western Cape
079 095 2121 | lusunziingani@gmail.com

Dear Hiring Manager

I am writing to express my interest in the job post at your organization. I have **2 years** of professional development experience across finance, fleet and logistics systems, where I have been involved in building, maintaining and improving software components used in active business environments.

In my current role as a ***Junior Software Developer*** at Omega Fleet Services, I work with **JavaScript**, **HTML5**, **CSS**, Angular and SQL to implement software solutions based on defined business and technical requirements. I have practical experience working with ***PostgreSQL*** and Oracle databases, integrating REST and SOAP services, and working with ***XML*** and ***JSON*** data across internal and third-party systems.

My role has also given me hands-on exposure to maintaining existing enterprise applications, troubleshooting defects, identifying root causes and implementing reliable solutions. I contribute to unit testing, **UAT support**, code reviews and **technical design** discussions, while working closely with Product Managers, Business Analysts, IT Operations and other developers to ensure that software changes meet both technical standards and business needs.

I am comfortable working within agile development environments and regularly participate in **stand-ups, sprint planning, retrospectives** and cross-functional discussions. I also document code, configurations and technical processes to support knowledge sharing and maintainability across the development team.

I would welcome the opportunity to contribute my development experience, technical skills and contribute to your organization.

Yours sincerely,
Ingani Mphephu

Professional Summary

Software Developer with 2 years' experience across finance, fleet and logistics systems, building and maintaining front-end and integration components across enterprise systems. Proficient in JavaScript, HTML5, CSS, and Angular, with practical SQL experience across PostgreSQL and Oracle. Comfortable integrating REST and SOAP services, troubleshooting defects to root cause, and supporting test planning and UAT. Works effectively within agile teams alongside Product Managers, Business Analysts, and IT Operations, and communicates technical detail clearly in documentation and code review.

Skills & Competencies

Technical

- JavaScript, CSS, HTML5, and jQuery
- Angular for component-based UIs
- SQL against PostgreSQL and Oracle
- REST, SOAP, and XML integration
- Bug identification
- Test planning (UAT)
- Responsive Web Design
- Front-end troubleshooting
- Cross browser and Device Testing
- Website content update
- Git and code review workflows
- Data analytics
- Prompting and AI productivity

Professional

- Technical Script Documentation
- Translating requirements into tasks
- Acting on code review feedback
- Cross-functional collaboration
- Agile delivery participation
- Attention to detail in regulated systems
- Architecture build

Professional Experience

Junior Software Developer – Jan 2024 to Present
Omega Fleet Services – Cape Town, Western Cape

- Implement software solutions to defined specifications using JavaScript, HTML5, and jQuery, working under the guidance of senior developers.
- Build and maintain front-end components in Angular, applying established patterns and coding standards.
- Write and optimize SQL queries against PostgreSQL and Oracle databases, supporting data retrieval and reporting needs.
- Consume and integrate REST and SOAP web services, working with XML and JSON payloads across internal and third-party systems.
- Contribute to the maintenance of legacy Oracle Forms applications, developing familiarity with enterprise systems in active production use.
- Troubleshoot and debug defects within assigned modules, applying a methodical approach to identify root causes rather than surface symptoms.
- Write and maintain unit tests, supporting the team's wider test planning and automation efforts.
- Participate in code reviews, both submitting work for feedback and reviewing peers' contributions.
- Attend technical design sessions, contributing ideas while learning the team's architectural conventions and best practices.
- Collaborate with Product Managers, Business Analysts, and IT Operations to clarify requirements and resolve issues.
- Document code, configurations, and technical processes to support knowledge sharing across the team.
- Participate actively in agile ceremonies, including stand-ups, sprint planning, and retrospectives.
- Build domain knowledge in Financial Services fleet and logistics, developing towards subject matter expertise in supported business areas.
